Forest for the Trees

Forest for the Trees is a coatstand from one flat metal sheet. Two parts are cut by laser from flat steel. The branches are folded, the two tree-parts slide into each other and are then epoxy-coated. Forest for the Trees is available in black, red and treebark brown.

 Double Dutch – Knitty Gritty

The clog collection arose from a longstanding interest in folklore and traditional customs. In making the clogs, old trades like knitting, crochet and embroidery were used.

BCXSY
 CHANGE!

Furniture and home accessories built from rubber-coated foam. While many foam products are machine-cut, BCXSY introduces an element of handwork. The collection is constructed from CNC-cut blocks, which are combined and then cut by hand. Different densities of foam are used for different elements, giving the collection both softness and structure.

MORGEN Studio
 WOOD

Tree trunks from different wood species are used to build this tripod. Branches, unevenness and little clefts mark this natural product and give it an individual texture.

Laser Chair

This kitchen chair is laser-cut, featuring perforated decorations which resemble the holes that children cut out from folded paper.

14

Office Chair

In the summer of 2001, Ineke Hans set up a children's collection, Black Beauties, thirteen products with some very traditional small items for boys (crash car) and girls (skipping rope). All items are made of black recycled plastic and are wind-, water-, salt-, acid-, UV-resistant.

Eat Your Heart Out

A standard sheet of plywood was laminated with a different colour on each side. Four sets of chairs can be cut out of this laminated sheet. From each set of components, 16 different stacking chairs with different colour combinations can be made.
